<input type="checkbox"/>		CC-Fönsterdrev Fönsterdrev	3-C Production AB		Listed	Weatherproofing systems, tape and sealing strip	CC-Fönsterdrev består av finporig, impregnerad skumplast som är 30 mm tjock och som pressas samman till en tjocklek av 2 mm . CC-Fönsterdrev klipps i lagom längd och förs in i spalten mellan karm och sidostycke. Vid normal rumstemperatur expanderar remsan till sin fulla tjocklek på 1-3 timmar. CC Expanding sealer consists of fine porous foam that is compressed to a thickness of 2 mm. Cut off the proper length and place it into the gap between the frame and the side piece. After 1-3 hours the sealer expands to its full thickness of 30 mm. CC Window Drive is environmentally friendly and does not contain isocyanate * Which means that the installer does not need to use protective clothing or make continuous medical examinations. Other advantages are that the sealer remains elastic and the window/door can be adjusted without any problems. Overall, you get significant time savings compared to conventional sealers		2019-05-03
